

Young teens sexually active

MORE than one in 10 boys and one in seven girls have sex by the time they turn 15, according to a report yesterday. The HSRC report was compiled from data collected in 2008. It covered 15 000 households across the country. In the 12-to-14 age group, 10,8% of boys and 14,5% of girls said they had had sex. More than a quarter of girls had sex partners five or more years older than themselves – increasing HIV infection risk. – SAPA
